

Recommendations for Writing an Exposé for the Application to the Master's Program Sustainable Engineering of Infrastructure

1. Front page

- personal details: first name, surname, academic degree
- title of bachelor's thesis/project
- subject area
- details about supervisor/s
- if applicable, details about cooperation with other scientists and institutions

2. Abstract of thesis / project

Explain your project in general terms (no more than 15 lines).

3. State of research

Short and precise explanation of the state of research. It must refer directly to your project, and you must name the most important works by other scientists in your field of research. Recent research should be explained in such a way as to clearly outline the idea, the context, and new aspects of your own project.

4. Goals of research project

Based on the state of research, clearly explain the scientific goals of your research project and describe the special contribution of your project to general research.

5. Summary of thesis

The summary is the nucleus of the exposé. It provides information about the structure and shape of your thesis. Here, detailed information about the following aspects is expected:

1. Epistemological interests and theoretical frameworks
2. Methodological instruments used (methodology)
3. Most important results and outcomes

6. Bibliography

In the bibliography, list the works you referred to in your exposé as well as a choice of further relevant reading you would like to suggest.

8. Formal aspects

Your exposé should be written in English, with a maximum length of 7,500 characters, including spaces. Please ensure that the layout is reader-friendly.
